

PAYS FOR ITSELF WITH MORE TRIPS TO THE ELEVATOR
ProTrap® Electric Hopper Opener

Unload Faster, Easier and Safer

A010FL-1111

Get the one-two punch in trailer automation! Pair your 4500 Series electric tarp with the ProTrap® electric hopper door opener. ProTrap® slides the hopper doors open and closed while you stay back, out of the dust.

Shur-Co's ProTrap® has all-metal gears and housing that are designed to handle hard stops, with a high-efficiency planetary gear reduction and circuit breaker at the battery to protect the motor; no need for unreliable limit switches that are easily damaged by field conditions. Our sealed SMARTwire™ harness helps prevent corrosion of connectors. We also provide integrated motor protection from road debris with our built-in protective mudflap.

Actual torque varies based on wire size, length and battery voltage; motors are sized to protect your trailer components. The 150 low-torque motor is standard for trailers with strap-style traps; the 250 motor is standard on rack-and-pinion traps

You can run the front and back hoppers, your electric tarp and two additional 12-volt accessories with our five-channel SMARTtransmitter®. It deactivates when the flip-style cover is closed or after three minutes of inactivity. There are no exposed buttons, and everything is clearly labeled. A cab- or trailer-mounted master disconnect switch, standard with every kit, kills power to the tarp and traps – no complicated button sequence is required.

Key Features: All-Metal Gear Motor, Automatic Brake to Hold Door in Position, Universal Mounting Bracket, 1-Bolt Manual Changeover, Master Disconnect Switch, SMARTwire™ Sealed Harness, 5-Channel SMARTtransmitter®. *ProTrap® comes preassembled for faster install.*

PROTRAP® ELECTRIC HOPPER OPENER

Fastest, Easiest Installation on the Market

The ProTrap® comes ready to mount right out of the box, with pre-wired motor and remote/switch box, plus all necessary wiring, plugs, receptacles and switches.

The unit replaces your existing manual gearbox, attaches to your existing shaft* and mounts to your existing knock rails. (*Requires cutting the shaft, length based on the mounting location.) The 1/4-inch plated steel universal mounting bracket bolts directly to your trailer.

In the rare event of a breakdown, the ProTrap® can be switched to manual operation in seconds and you can keep on working – even while the motor is out being repaired. ProTrap's motor comes out with four bolts, leaving the rest of the unit intact and operational. Other products require pulling the motor off the shaft – not easy after any time at all in the field.

In addition to the savings in time and convenience, the ProTrap® adds value to your trailer – a welcome benefit when it's time to trade up!
