

SIMPLE-TO-USE 5-CHANNEL INTERFACE

A017FL-0315

The SMART1+™ has the original SMARTransmitter's basic functionality *plus* additional features our customers have requested, including increased range and Express mode capabilities. S.

Switch between applications with the Select button, only cycling between those you've installed (each channel is labeled, and the active one will be lit up). A patent-pending flip-style lid provides protection for the buttons, prevents accidental operation and shuts off the transmitter to save battery life.

The SMART1+™ can be used in standard "press-and-hold" style on any Shur-Co® electric system, but a connection to the motor encoder is required for Express mode operation. (ProTrap® systems purchased between 2009 and 2012 may not have motors equipped with encoders.) This remote provides automatic turn-off if a stall condition is detected. It uses two AAA batteries for longer life, and the battery compartment lid removes with a single screw for easy access.

Key Features: SMART1+™ Remote, AAA Batteries (2).
