

## Why should I upgrade to your Heavy-Duty Bows?

You will need fewer **Heavy-Duty Bows** to handle the tarp's weight, and by spacing them further apart than you would standard galvanized steel bows, you acquire a larger opening for loading. **Heavy-Duty Bows** are preferred by many farmers for silage or for dumping gravel or distiller's grain, as these are heavy and/or wet loads these bows can support with less tarp wear.

For greater bucket clearance, **Heavy-Duty Bows** make use of a rollaway ridgepole. This allows you to space the bows up to a full 12 feet apart, which makes for far less interference during loading. (The ridgepole slips into a pocket sewn and sealed on the outside of the tarp so it rolls up with the tarp, out of the way.)

**Heavy-Duty Bows** are also available in a flat style that reduce interference with loaders. The no-rise design is perfect for open-top vans that are maxed out on their height allowance.

For additional information about Shur-Co® products, give us a call at **1.800.474.8756** Monday through Friday, from 8:00 a.m. to 5:00 p.m. Central Time. Our friendly and knowledgeable Customer Service Representatives will be happy to answer your questions. Or log on to our website at [www.shurco.com](http://www.shurco.com).

*Top: When used with a rollaway ridgepole, Heavy-Duty Bows can be spaced up to 12 feet apart for more wide-open loading.*

*Insert: A Heavy-Duty Bow in the flat style.*

*Left: Rollaway ridgepole inserted into tarp.*
