**POWER UP/DOWN**

Remote will power up when cover is open. If cover is already open and remote is off, power up remote by pressing either operational button.

Remote will power down when cover is closed or left open for three minutes after last button is pushed.

**PAIR DEVICES (INTRODUCE REMOTE TO RECEIVERS)**

Each remote and receiver has a unique security code to prevent unauthorized operation. Before remote can operate receiver module, they must be paired, or introduced. This is typically done at factory before shipping. If remote must be introduced to receiver, or if second remote is being added to system, follow instructions below.

**Method 1:** Make sure power is supplied to receiver. For receivers shown in step 4A, remove eight fasteners holding plastic cover onto receiver assembly.

**STEP 1:** From **MAIN MENU** on remote, make sure **SETUP** is circled and press **SELECT**.

**STEP 2:** Arrow to **ADD DEVICE** and press **SELECT**.

**STEP 3:** Remote will now be waiting for a receiver to enter pairing mode.

**NOTE:** This manual is for SMART2™ remotes that are version 11. To check version of your remote, go to **SETUP** menu, arrow down to **INFORMATION** (near bottom of list) and press **SELECT**. If version listed is not 11, obtain correct manual from Shur-Co®. Call Help Line below or visit www.shurco/support/manuals.
STEP 4A: For receiver cover shown below (tarp, hopper, etc.), you will need to reach blue button inside gray cover. Press and hold blue button for approximately five seconds. Release after red LED starts flashing.

![Diagram of receiver cover with wires connected to solenoid and blue programming button highlighted.]

STEP 4B: For LiteALL™ control module, press and hold Output A button for approximately five seconds. Release button after green LED starts flashing.

![Diagram of control module with Output A button highlighted.]

STEP 4C: For Mini Modules shown below, press and hold both buttons for approximately six seconds, then release.

![Diagram of Mini Module with both buttons A and B highlighted.]

STEP 5: Remote will confirm it has detected receiver. Verify device type (tarp, hopper, etc.) is correct and press Select.

![Menu showing device type found: Type: Hopper, ID: 0000008E, Version: 011.]

Notice:

If device type is incorrect, call Shur-Co® Help Line. You can damage system if you operate wrong device-type receiver.

STEP 6: You can rename device at this time. If you choose, see section on renaming your device on page 9. This can be done later, if desired. If current name is acceptable, highlight Accept and press Select button to continue.

![Menu showing change name options: HOPR0000008E, Accept, Cancel.]

STEP 7: For motor control receivers (tarp, hopper, etc.), press Select button to confirm and add device. You will see a message confirming information has been saved.

![Menu showing add new device options: Type: Tarp, ID: 00000093, Version: 011.]

STEP 8: If you have additional SMART2™ devices on your trailer that need to be paired, repeat process for remaining devices. When you are done, all new devices should show up on Main Menu of remote within a few seconds after opening cover.

STEP 9: Refasten plastic cover onto receiver assembly (applies only to receiver shown in step 4A).

Method #2:

If you already have a remote that is paired to a device, and you want to introduce a second remote, there is an alternate method to put device into Learn mode.

Instead of pressing button on Mini Module in step 4, use old remote that is already paired to module and select Set To Learn from Edit Device menu.
STANDARD OPERATION

When cover is opened, remote will default to Main Menu screen. Setup option will always be available on Main Menu screen. Any paired (introduced) devices will appear on Main Menu screen within a few seconds if connected to power and within range.

NOTE: If you ordered an upgrade kit, remote may not be paired with device yet. See section on pairing (introducing) devices.

NOTE: When devices are paired with remote, they will show up with default names like TARP00000093. Rename each device as you choose (example: TRLR4 TARP or FRONT HOPPER) by using SETUP menu on remote. See section on renaming devices.

STOPS ARE
NOT SET

AFTER A FEW SECONDS, PAIRED
(INTRODUCED) DEVICES WILL BE
DISPLAYED ON MAIN MENU SCREEN

NOTE: Devices must be connected to power and close by in order for remote to locate them.

Use up/down arrow buttons to highlight device you wish to operate. In figure below, tarp system is highlighted. Use operational buttons to control selected device. For motorized devices, selected device will operate in whatever mode (Manual or Express) you have set as default. See section on setting default operating mode.

NOTE: Tarping systems ship from factory defaulted to EXPRESS MODE. However, travel stops must be set before system will operate in EXPRESS MODE. Press SELECT on highlighted device to access detailed control screen. Tarping systems will also operate in EXPRESS MODE when operated from buttons on trailer Mini Module, if travel stops are set.

You can operate devices in two different modes:

Manual Mode - Motor runs only while command button is pressed.

Express Mode - Motor runs automatically until it reaches end of travel or until you press any button on remote to stop it.

STANDARD OPERATION

(MANUAL MODE - MOTORIZED DEVICES)

In Manual Mode, the selected device can be operated by pressing and holding operational buttons labeled Open or Close.

If travel stops have been set, current position of device will be displayed on screen. Once motor reaches end of travel, screen will show tarp or trap fully open or closed.
STANDARD OPERATION (EXPRESS MODE - MOTORIZED DEVICES)

To temporarily switch to Express Mode, use down arrow button to highlight To Express Mode and press Select.

HIGHLIGHT "TO EXPRESS MODE" & PRESS SELECT

NOTE: If always use EXPRESS MODE, you can select it as default operating mode. Default operating mode can be set individually for each system (tarp, front hopper, back hopper, etc.). See section on setting default operating mode on page 11. Tarp systems shipped from factory defaulted to EXPRESS MODE, but will operate in momentary fashion until travel stops are set.

While motorized device is operating, current position of device will be displayed on screen. Once motor reaches end of travel, motor will shut off and screen will show device as fully open or closed.

NOTE: Set travel stops before EXPRESS MODE can be used.

NOTE: Travel stops can only be set on Shur-Co® motors that have an encoder cable, such as 4500 Series HD and Protrap® motors.

In Express Mode, simply press and release operational button labeled Open or Close. If you need to stop operation before it reaches travel stop, just press any button or close cover.

NOTE: If tarp system is commanded to operate in EXPRESS MODE from push-buttons on trailer-mounted Mini Module, remote will only stop system if OPEN or CLOSE buttons are pressed. Remote will not stop system if SELECT or arrow buttons are pressed or if remote cover is closed.

NOTE: Many devices (including tarp and standard hopper controllers) expect system to tighten (or partially "stall") on closed side before remote will display CLOSED status.

NOTE: If motor cannot travel to full open or closed position (due to a heaped load or other obstruction), motor will travel as far as it can and stop automatically. Display will then show system partially open and an error message will be displayed.
For lights and other dual-output latching devices, press operational button labeled On/Off to toggle output on and off.

Display on remote will indicate whether output is currently on or off. Refer to device manual for additional information.

For dual-output momentary devices, press and hold operational button labeled On/Off to keep device on. Release button and device will turn off.

**NOTE:** For dual-out hybrid devices, OUTPUT A will be latching and OUTPUT B will be momentary.
Set Travel Stops (End Stops) for Motorized Devices

**SET TRAVEL STOPs (END STOPs) FOR MOTORIZED DEVICES**

SMART2™ system can learn and remember where you want each motorized device to stop on open side. After installing system, installer can teach motor controller where travel stops are located. Unless something changes on your trailer, you will only need to do this once.

NOTE: Travel stops can only be set on Shur-Co® motors that have an encoder cable, such as 4500 Series HD and Protrap® motors.

**STEP 1:** From main menu, make sure Setup is circled and press Select.

<table>
<thead>
<tr>
<th>CANCEL</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACCEPT</td>
</tr>
<tr>
<td>SELECTING ACCEPT AND PROCEEDING WILL CLEAR ALL TRAVEL STOPS</td>
</tr>
</tbody>
</table>

**STEP 6:** Select Accept option.
STEP 7: Press operational button labeled Close to move device (tarp, hopper door, etc.) to fully closed position. Continue holding button until motor automatically turns off. Make sure there are no abnormal conditions that might stop device from fully closing, like heaped load or ice buildup on trap door. Verify device (tarp, hopper door, etc.) is fully closed. Press Select to save this position.

NOTE: System will automatically turn off within approximately one second of tightening on closed side. Do not attempt to set closed side stop just before point where system tightens up. During operation, control module will always look for system to tighten up (partially “staff”) before system will turn off and display CLOSED.

STEP 8: Press Open to move device to desired open side location. Open side travel stop should be set so device will stop prior to making contact with any mechanical stop (tarp stops, hopper door stop, etc.). This will save on system wear and tear. Press Select to save this position.

STEP 9: Press Select to complete Set Stops procedure if you accept responsibility for operating system in Express Mode. Press any other button to cancel.

** NOTICE **

BY PRESSING THE SELECT BUTTON, YOU ASSUME THE RESPONSIBILITY OF THE EXPRESS OPERATING MODE

STEP 10: Press Select after confirmation screen is displayed.

CLEARING (DELETING) TRAVEL STOPS

If you do not plan to operate system in Express Mode and you do not need position feedback, clear travel stops by selecting Abort in step 7 above.

Alternatively, go to Setup, then Edit Device, then select device, then Delete Stops.

If you do not have your remote, clear travel stops by holding programming button shown on page 3, step 4.

- If you have standard Mini Module shown on page 3, step 4A, red light will stop blinking after blue button is held for 30 seconds. Release blue button after light stops blinking.

- If you have small Mini Module shown on page 3, step 4C, there is no indicator light, so use clock or watch to make sure Button A and Button B are held down together for 35 seconds.
**Rename Devices**

**RENAME DEVICES**

Name of each device displayed on remote can be changed by following this procedure.

**NOTE:** On LiteALL™ module and Mini Module, both outputs can be given a custom name also (see LiteALL™ Owner’s Manual or page 11 in this manual).

**STEP 1:** From Main Menu, make sure Setup is circled and press Select.

**STEP 2:** Arrow down to Edit Device and press Select.

**STEP 3:** Press arrow buttons to highlight device you wish to rename, then press Select.

**STEP 4:** Highlight Change Name and press Select.

**STEP 5:** Arrow to highlight back arrow symbol and press Select to delete unwanted characters.

**STEP 6:** Arrow up or down to highlight desired characters and enter by pressing Select. When done, arrow to Accept and press Select.

**STEP 7:** Remote will confirm name has been changed. Press Select button to finish.

SET DEFAULT DEVICE (OPTIONAL)

From factory, remote defaults to Main Menu when lid is opened. If desired, a default device can be selected so remote jumps directly to detailed control page for that device for immediate operation when lid is opened.

**NOTE:** A default device will only be ready for immediate operation if receiver on trailer is connected to power and within range.

Setting a default device can save time by eliminating unnecessary button presses in these situations:

- There is only one SMART2™ device being used with remote.
- A particular SMART2™ device is always used first when remote lid is opened.
- A particular SMART2™ device is used more frequently than other devices.

Follow instructions below to set a default device on SMART2™ remote.

**STEP 1:** From Main Menu, make sure Setup is circled and press Select.

**STEP 2:** Highlight Default Device and press Select.

**STEP 3:**
Highlight desired default device and press Select.

**STEP 4:**
Remote will confirm default device has been changed. Press Select to finish.

**STEP 5:**
Close remote cover and re-open. Remote will jump to Operational page of default device.
Renaming Outputs (Outputs A and B):
In addition to giving the LiteALL™ module and Mini Module a custom name on your SMART2™ remote, you can also rename each of the outputs displayed on the operational screen by following this procedure.

**STEP 1:** From Main Menu, arrow down to Setup and press Select.

**MAIN MENU**
- SETUP
  - TARP
  - FRONT HOPPER
  - BACK HOPPER
  - LIGHTS

**STEP 2:** Arrow down to Edit Device and press Select.

**SETUP MENU**

**STEP 4:** Highlight Name Outputs and press Select.

**EDIT DEVICE LIGHTS**
- BACK TO SETUP
- CHANGE NAME
- NAME OUTPUTS
- DEFAULT MODE
- SET TO LEARN
- DELETE DEVICE

**STEP 5:** Arrow up or down to highlight the back arrow symbol and press Select to delete unwanted characters.

**NAME OUTPUT A**
- OUT A
  - ACCEPT
  - CANCEL
  - ABCDEFGHIJKLMNOPQRSTUVWXYZ
  - 0123456789<-

**STEP 6:** Arrow up or down to desired characters and enter by pressing Select. When done, arrow to Accept and press Select.

**NAME OUTPUT A**
- LIGHT1
  - ACCEPT
  - CANCEL
  - ABCDEFGHIJKLMNOPQRSTUVWXYZ
  - 0123456789<-

**STEP 7:** Remote will confirm name has been changed. Press Select to finish.

**LIGHT1**
- NAME CHANGED

**STEP 8:** Repeat steps 5 through 7 for Output B.
SET DEFAULT OPERATING MODE (FOR MOTORIZED DEVICES)

After pairing to a device, remote will operate device in its default operating mode. Express Mode is default for tarping systems, Manual Mode for other motorized systems. At any time, default operating mode can be set to either Express Mode or Manual Mode for motorized systems.

**NOTE:** See section on Standard Operation for details on EXPRESS MODE and MANUAL MODE.

**NOTE:** For EXPRESS MODE to function, travel stops must first be set. See section on setting travel stops.

Setting default operating mode to Express Mode can save time by eliminating unnecessary button presses in these situations:

- A particular device will typically be operated in Express Mode.
- The operator is comfortable running device in Express Mode.

Follow instructions below to change default operating mode of a device using SMART2™ remote.

**STEP 1:** From Main Menu, make sure Setup is circled and press Select.

**SETUP MENU**

- **TO MAIN MENU**
- **DEFAULT DEVICE**
- **DEVICE ORDER**
- **ADD DEVICE**
- **EDIT DEVICE**
- **DELETE DEVICE**

- **CANCEL**
- **MANUAL MODE**
- **EXPRESS MODE**

**STEP 6:** Remote will confirm default has been changed. Press Select to finish.

**DEFAULT CHANGED**

**SELECT CONTINUE**

Shur-Co® HELP LINE: 1-866-748-7435
CHANGE DEVICE ORDER ON MAIN MENU

If you have more than one device, it is possible to change order in which devices will be listed on Main Menu screen.

Changing default device order can save time by eliminating unnecessary button presses in these situations:

• A particular SMART2™ device is used more frequently than other devices.
• A particular SMART2™ device is typically used first when remote cover is opened.

STEP 1:  From Main Menu, select Setup.

MAIN MENU

SETUP

TARP
FRONT HOPPER
BACK HOPPER

STEP 2:  Arrow down to Device Order and press Select.

SETUP MENU

TO MAIN MENU
DEFAULT DEVICE
DEVICE ORDER
ADD DEVICE
EDIT DEVICE
DELETE DEVICE
MAIN MENU MODE

STEP 3:  Arrow to device you want to move on list. Press Select. Selected device will be highlighted.

STEP 4:  Use arrow buttons to move device up or down list. When you have highlighted device in desired place, press Select to set and save new order.

STEP 5:  Repeat process if desired for any other devices. When finished, highlight Back to Setup and press Select.

STEP 6:  Close and then open remote cover. Your devices should be listed in updated order after remote locates them. Device must be connected to power and within range.
DELETE DEVICE

Any paired device on a remote can be deleted, or erased, from remote’s memory.

STEP 1: From Main Menu, highlight Setup and press Select.

STEP 2: Arrow to Delete Device and press select.

STEP 3: Arrow down to highlight device you want to delete and press Select.

STEP 4: Arrow down to highlight Yes and press Select to confirm. You will see a message confirming information has been saved.

MANUAL OVERRIDE (Motorized Devices Only)

SMART2™ system automatically shuts off if an error is detected or at travel stops. These conditions can be bypassed in Manual Override.

NOTE: All travel stops are ignored in MANUAL OVERRIDE in addition to low motor RPM and low system voltage. Use caution when operating system in MANUAL OVERRIDE as system damage may result. Have system serviced if it routinely jumps to MANUAL OVERRIDE.

Situations where Manual Override will be prompted on remote include:

• You attempt to open your tarp or hopper system past open side travel stop.
• Your hopper was overloaded and system shuts off due to low motor RPM.
• Truck battery is almost dead and system detects low voltage and turns off.

Follow instructions below to operate in Manual Override:

STEP 1: After automatic shutdown due to error detection, error will be displayed on remote. While error is displayed, press same button (Open or Close) two more times.

STEP 2: You will be asked if you want to enter Manual Override. If you want to proceed, arrow down to Manual Override and press Select.

ATTENTION

IT APPEARS YOU ARE ATTEMPTING TO EXCEED SYSTEM SETTINGS. STOPS MAY NEED TO BE RE-SET. PLEASE CONSULT MANUAL.

WARNING! SELECTING MANUAL OVERRIDE WILL TURN OFF ALL LIMIT CONTROLS.

EXIT

MANUAL OVERRIDE

WARNING: THERE ARE NO LIMIT RESTRICTIONS!
SELECT TO EXIT

POSITION LIMIT
OPEN CLOSE

NOTE: MANUAL OVERRIDE can also be activated from receiver on trailer. After system turns off automatically, press same button (OPEN or CLOSE) two more times. Solenoid in receiver box will click rapidly three times to indicate MANUAL OVERRIDE.

Shur-Co® HELP LINE: 1-866-748-7435
MAIN MENU MODE

Enabling Main Menu Mode allows you to control devices from Main Menu. Main Menu Mode can be enabled or disabled at any time. By default, this feature is enabled.

Enabling Main Menu Mode can save time by eliminating unnecessary button presses in these situations:

- Multiple devices are operated with remote within a short time of each other.
- The operator prefers operating from Main Menu and understands which mode (Express Mode or Manual Mode) a motorized device will operate in while using Main Menu Mode.

Follow instructions below to enable or disable Main Menu Mode:

STEP 1: From Main Menu, highlight Setup and press Select.

STEP 2: From Setup Menu, highlight Main Menu Mode and press Select.

STEP 3: Arrow down and circle Enable, then press Select to enable Main Menu Mode. If you want to disable Main Menu Mode, highlight Disable and press Select.

STEP 4: You will see a confirmation screen. Press Select.

STEP 5: You will see an Info Saved message flash briefly, then remote will jump to Setup Menu. Go to Main Menu.

STEP 6: Arrow down to circle a device on Main Menu. It may take a few seconds for devices to pop up on Main Menu. Note there are now labels above operational buttons if Main Menu Mode is enabled.

STEP 7: You may now use operational buttons to control highlighted device. For motorized devices, highlighted device will operate in whatever mode (Manual Mode or Express Mode) you have set as default mode. See section on setting default operating mode.
**ADJUST SHUT-DOWN TORQUE OF DEVICE**

Shut-down torque can be adjusted on certain devices, including ProTrap™ and MaxxTrap™ electric hopper door openers.

- Decreasing shut-down torque will reduce force applied to system on closed side but may cause system to turn off and display error message under heavy loads (fertilizer loads on hopper device, for example).
- Increasing shut-down torque will allow motor to continue to operate under heavier loads without turning off and displaying error message. However, motor will also apply more force to system on closed side.

**STEP 1:** From Main Menu, select Setup.

**STEP 2:** From Setup Menu, highlight Edit Device and press Select.

**STEP 3:** From Edit Menu, highlight device to be adjusted.

**STEP 4:** From Edit Device menu for selected device, arrow down to Set Torque and press Select.

**STEP 5:** From Set Torque menu, use up and down arrows to change setting. To cancel, close cover. To save, press Select.

**NOTE:** Factory default setting for hopper is MED.

**STEP 6:** You will get a confirmation screen. Press Select and repeat process for any other devices.

| I have a motorized system and: The system will not run with the push-button switches on the gray receiver box; I can hear a click from the gray cover when I press the buttons on the box. OR The system is stuttering when I try to operate it. | 1. There may be a bad battery or poor battery connection. Try hooking up power from a different 12-volt battery and re-test the system.  
2. Is a battery charger or power supply being used to power the system? If so, hook the system/trailer to a truck battery and try again. Battery chargers alone will most likely cause the system to malfunction.  
3. Remove the gray cover from the receiver assembly. Make sure the green and yellow wires are connected to the solenoid and are making good contact.  
4. Check system wiring for corrosion, including any circuit breakers near the truck battery. If corrosion is present, you may get 12 volts to the receiver, but a motorized system may not function due to the resultant voltage drop in the wiring or circuit breaker when the Open/Close button is pressed.  
5. Check all encoder wires between motor and receiver for cuts. Make sure connectors are connected tightly. Make sure the black encoder wire is always connected to another black encoder wire at connectors. On 4500 HD tarping systems, make sure sealed weatherpack connectors are snap-locked together. There is one weatherpack connector near the motor and one in the kingpin area.  
   **NOTE:** Bypass circuit breaker and test system to verify breaker is not corroded inside.  
6. Verify that you have 12 volts at the motor while an operational button is being held. If you have 12 volts and the motor is not running, there may be a problem with the motor. If the voltage at the motor drops below 12 volts, check the system wiring for corrosion. You may also have a bad truck battery. Start the truck and try again. Call Shur-Co’s Help Line.  
7. The receiver or solenoid may be damaged. Call Shur-Co’s Help Line.                                                                 |
| I have a motorized system, and it will not run with the push-button switches on the gray receiver box; I can’t hear a click from the gray cover when I press the buttons on the box.                                | 1. Remove the gray cover from the receiver assembly. Verify that 12V is being applied to the motor control module in the gray cover of the receiver box.  
   **NOTE:** Make sure voltmeter reads +12 volts and not -12 volts. Do this while red voltmeter lead is contacting red wire ring terminal from module and black voltmeter lead is contacting black wire ring terminal from module.  
2. The receiver may be damaged. Call Shur-Co’s Help Line.                                                                                                                                                                                                                                                                 |
| I have a motorized system, and it is displaying that it is still slightly open, but it is actually closed.                                                                                                                                          | 1. Make sure there is no obstruction to the system (heaped load, ice, etc.).  
   **NOTE:** For tarp systems, it is normal for remote to display that it is slightly open if there is a heaped load. Heaped loads will settle, so be sure to check for tarp tension after driving a short distance! After unloading trailer and closing tarp, remote should display that it is closed.  
2. Make sure you hold the Close button long enough for system to tighten on the closed side.  
3. Reprogram your travel stops. Make sure you do not program the stops while there are any obstructions in the way (heaped load, ice, etc.). If this problem occurs again, call Shur-Co’s Help Line.                                                                                     |
| System will not allow Express Mode operation.                                                                                                                                            | 1. Set the travel stops. See section on setting travel stops.  
2. If the travel stops can’t be set, check encoder wires as described on page 18, paragraph 5.  
3. Call Shur-Co’s Help Line.                                                                                                                                                                                                                                  |
MORE QUALITY PRODUCTS FROM SHUR-CO®

- Genuine Replacement Tarps
- Genuine Replacement Parts

- Agriculture Products
  - *The Original* Shur-Lok®
  - Shur-Lok® Junior
  - Premium Belt ‘n Ratchet
  - Cable-Lok™
  - Turning Point™ Bow
  - Tater-Top™

- SMARTrailer™ Accessories for Agriculture Products
  - SMART2™ Remote
  - SMART3™ Remote
  - 4500 Series HD Electric
  - Electric Shur-Lok®
  - AutoTrap™ Hopper Opener
  - ProTrap® Hopper Opener
  - Electric Gate & Hoist
  - LiteALL™ Work Lights
  - Cable-Lok™ Electric Upgrade
  - Electric Turning Point™ Bow
  - Solar Power Pack
