

THE LIGHT-DUTY MOTOR OPTION

A013FL-0518

The Shur-Lok® Electric accommodates sloped or vertical trailers and boxes, works with minimum clearance and is easy to install and operate. This light-duty motor has manual override capability and mounts on the front or the rear. Works on existing Shur-Lok® systems and bodies up to 34' long.

The Shur-Lok® Electric comes equipped with a front and rear bungee return and durable steel components and can be installed tight up against the box for tight clearances between the cab and body. Available in galvanized steel or stainless steel for additional corrosion resistance.

The versatility of having a light-duty motor option allows you to better fit your trailer size and configuration. Proper motor choice can affect how much tension your tarp creates over the bows and end caps when in the closed position. This impacts wind flutter control and tarp wear and can also affect how the tarp rolls and handles irregularities during operation.

Key Features: 90° Worm Gear Motor, Pivot/Slide Arm Design w/Versatile Mounting Options, Rocker Switch in Cab or Remote Controls, Bungee Return System, Exposed Spline.
