

## DOUBLE DROP-DECK APPLICATIONS

F016FL-0221

Lower deck bows come equipped with a triple set of wheels to transition to either front or rear raised decks. Drops must constitute a difference of 8 inches to completely transition system from front to rear.

The solidly built ShurTite™ system for 48-foot to 53-foot double drop-deck trailers offers the ultimate accessibility, opening from the front or rear, with a standard access door and center skylight for better daytime accessibility. Front and rear piggyback connectors tie the front and rear bows to the lower intermediate bows.

Inside height will accommodate most 20-foot and 40-foot containers. The patented extruded corner design gives you a full inside cube's worth of loading space.
