

## SHUR-TRAK™ II: PREMIUM CABLE TARP

### SHUR-TRAK™ II VS SHUR-TRAK™ II SHORTSTOP™

Fully deployed, the standard tarp-over-rail design gives coverage several inches over the side rail to shed water. If resistance is not a factor, our Short-Stop™ option will eliminate friction, helping to extend the life of your tarp. The tarp stops short of the inside rail.

### LOW FRICTION AND HIGH STRENGTH

Our exclusive Twist-Lok™ bow shanks, constructed of low-friction/high-strength polymer, twists off without removing the cable. The shanks are available in standard and Short-Stop™ styles that let you replace damaged bows faster.

### REDUCES BINDING

Wheel wind guards with an inline design can be added to reduce binding. Another option is a continuous wind guard with an offset arm that positions the wind hooks under the anchor as the system opens and closes. Close proximity to the bottom of the bow shanks limits wind up underneath the sides of the tarp. This is ideal for replacement tarps eliminating the problem of existing anchors lining up.

### MOTOR OPTIONS

Choose between Durabuilt™ motor for systems under 25' and heavy-duty chain drive motor for systems over 24'. An electric system is available with the ShurLink™ system.

### TENSION ADJUSTMENTS MADE EASY

The improved cable tension scale is equipped with a thrust washer to make adjustments easy. A sight gauge shows if more tension is needed, a correction you can make with a few twists of your wrist.

### REDUCES TARP STRESS AND SAGGING

A rear bow stabilizer prevents the rear bow from rocking. This reduces stress on the tarp, cable and bow shanks while lessening tarp wear at the point of attachment.

### REMOTE OPTIONS AVAILABLE

Our optional 30-channel ShurLink PRO™ or 5-channel ShurLink EZR™ wireless remote controls are available. Control multiple Shur-Co® wireless products with a single remote at ranges of 150'.
